# Contents

## Preface

### 1 Introduction and Course Overview

- Course Objectives 1-2
- Intended Audience and Course Prerequisites 1-3
- Suggested Agenda 1-4

### 2 Overview of Oracle TimesTen In-Memory Database

- Objectives 2-2
- Oracle TimesTen In-Memory Database 2-3
- TimesTen In-Memory Database: Persistent, Recoverable, and Highly Available 2-4
- Oracle In-Memory Database Cache: An Oracle Database Option 2-5
- Oracle In-Memory Database Cache 2-6
- Extremely Fast Response Time 2-7
- Update Throughput and Linear Scalability 2-9
- TimesTen Application Development Frameworks 2-10
- Summary 2-11

### 3 Getting Started with TimesTen In-Memory Database

- Objectives 3-2
- TimesTen Quick Start 3-3
- TimesTen Documentation Library 3-5
- TimesTen Instances and the Instance Administrator 3-6
- Data Source Names (DSNs) 3-7
- TimesTen DSN Attribute Classifications 3-8
- Define a Direct-Connect DSN on a UNIX System 3-9
- Define a Direct-Connect DSN on a Microsoft Windows System 3-10
- Create a TimesTen Database 3-11
- `ttIsql` Utility 3-12
- Oracle SQL Developer 3-14
- Create a TimesTen Database Connection in SQL Developer 3-15
- Use a TimesTen Database Connection in SQL Developer 3-16
- Disconnect a TimesTen Database Connection from SQL Developer 3-17
- `ttDestroy` Utility 3-18
- Summary 3-19

<b>4</b>	<b>Creating and Accessing TimesTen Database Elements</b>	
	Objectives	4-2
	Database Elements	4-3
	Data Types	4-4
	Tables	4-5
	SQL Table DDL Statements	4-6
	Access Control	4-8
	Define Users	4-9
	Assign Privileges	4-10
	Connection Strings	4-12
	User IDs and Passwords	4-13
	Indexes	4-14
	SQL Index DDL Statements	4-15
	Alter a Table	4-16
	SQL DML Statements: <code>SELECT</code>	4-18
	SQL DML Statements: <code>INSERT</code>	4-19
	SQL DML Statements: <code>UPDATE</code>	4-20
	SQL DML Statements: <code>DELETE</code>	4-21
	<code>ROWID</code> and <code>ROWNUM</code>	4-22
	Sequences	4-23
	Views	4-24
	Synonyms	4-26
	Create a Table by Using SQL Developer	4-27
	Create an Index by Using SQL Developer	4-28
	Create a Sequence by Using SQL Developer	4-29
	Create a View by Using SQL Developer	4-30
	Assign Object Privileges to a User in SQL Developer	4-31
	Remove Object Privileges from a User in SQL Developer	4-32
	PL/SQL Support in TimesTen	4-33
	PL/SQL Anonymous Blocks	4-34
	PL/SQL Stored Procedures and Functions	4-35
	PL/SQL Packages	4-36
	Reference PL/SQL Package Objects	4-37
	Differences Between TimesTen and Oracle PL/SQL	4-38
	TimesTen APIs	4-39
	OCI Support in TimesTen	4-40
	Connect to a TimesTen Database from an OCI Application	4-41
	Pro*C/C++ Support in TimesTen	4-42
	<code>ttSrcScan</code> Utility	4-43
	Summary	4-44

## **5 Managing TimesTen Databases**

Objectives 5-2

`ttBulkCp` Utility 5-3

`ttBackup` and `ttRestore` Utilities 5-4

`ttMigrate` Utility 5-5

`ttSchema` Utility 5-6

TimesTen System Tables and Views 5-7

TimesTen Database Memory Regions 5-8

`SYS.MONITOR` System Table: Database Memory Region Sizes 5-9

`ttSize` Utility 5-10

`ttStatus` Utility: TimesTen Database Connections 5-11

TimesTen Built-In Procedures 5-12

TimesTen Database RAM Policy 5-13

Database RAM Policy Setting 5-14

Change the Size of a TimesTen Database 5-15

Summary 5-16

## **6 Concurrency Control and Performance Tuning**

Objectives 6-2

Start and Complete Transactions 6-3

Implicit Commit 6-4

Transaction Logging 6-5

Transaction Durability 6-6

Transaction Isolation Level 6-7

Read Committed Isolation 6-8

Serializable Isolation 6-9

`ttXactAdmin` Utility 6-10

Prepare and Execute Parameterized Statements 6-11

TimesTen Query Optimizer 6-13

Query Optimizer Statistics 6-14

Compute Statistics 6-15

Update the Table and Column Statistics by Using SQL Developer 6-16

Use of Indexes in Query Processing 6-17

View an Execution Plan 6-20

Command Cache 6-23

Time Statement Execution 6-24

Summary 6-25

## **7 Configuring TimesTen Client/Server Connections**

Objectives 7-2

Overview of TimesTen Client/Server 7-3

Client/Server Setup and Configuration 7-4

Server DSNs 7-5

Define a Server DSN on a UNIX System 7-6

Define a Server DSN on a Microsoft Windows System 7-7

Logical Server Names 7-8

Define a Logical Server Name on a UNIX System 7-9

Define a Logical Server Name on a Microsoft Windows System 7-10

Client DSNs 7-11

Define a Client DSN on a UNIX System 7-12

Define a Client DSN on a Microsoft Windows System 7-13

Access a TimesTen Database with a Client/Server Connection 7-15

Other Communication Modes for Local Client/Server Connections 7-16

Configure a Multithreaded TimesTen Server Process 7-17

`ttStatus` Utility: Server Status and Client/Server Connections 7-19

Summary 7-20

## **8 Overview of Oracle In-Memory Database Cache**

Objectives 8-2

Oracle In-Memory Database Cache 8-3

Cache Oracle Data in TimesTen 8-4

Define the Set of Data to Cache 8-5

Read-Only Cache for Frequently Queried Data 8-6

Example: Multiple Read-Only Caches 8-7

Updatable Cache with Transactional Consistency 8-8

Example: Multiple Updatable Caches 8-9

Dynamic Cache 8-10

Example: Dynamic Caches 8-11

Sliding Window Cache 8-12

In-Memory Database Cache Grid 8-13

Summary 8-14

## **9 Getting Started with Oracle In-Memory Database Cache**

Objectives 9-2

Oracle In-Memory Database Cache: System Requirements 9-3

Create Oracle Users 9-4

Define a DSN for the TimesTen Database 9-6

Create TimesTen Users 9-7

Set the Cache Administration User Name and Password 9-8

Set the Cache Administration User Name and Password by Using SQL Developer 9-9  
Cache Grid Concepts 9-10  
Cache Grid Benefits 9-11  
Configure a Cache Grid 9-12  
Start the Cache Agent and Set an Agent Start Policy 9-13  
Start the Cache Agent by Using SQL Developer 9-14  
`ttStatus` Utility: Cache Agent Status 9-15  
Summary 9-16

## **10 Creating Cache Groups**

Objectives 10-2  
Cache Group Definition 10-3  
Cache Group Concepts 10-4  
Read-Only Cache Group 10-5  
Create a Local Explicitly Loaded Read-Only Cache Group 10-6  
Load and Refresh a Cache Group 10-7  
Unload a Cache Group 10-8  
Read-Only Cache Group Automatic Refresh Interval 10-9  
Pass-Through of Statements from TimesTen to Oracle 10-10  
Configure Statement Pass-Through 10-11  
Create a Local Dynamic Read-Only Cache Group 10-12  
Dynamic Load Operation 10-13  
Cache Group Data-Aging Policy 10-14  
Benefits of Read-Only Caching 10-15  
Benefits of On-Demand and Sliding Window Caching 10-16  
Asynchronous Write-Through Cache Group 10-17  
Create a Local Dynamic Asynchronous Write-Through Cache Group 10-18  
Create a Global Dynamic Asynchronous Write-Through Cache Group 10-19  
Create a Global Explicitly Loaded Asynchronous Write-Through Cache Group 10-20  
Attach a TimesTen Database to a Cache Grid 10-21  
Operations on Global Cache Groups 10-22  
Benefits of Write-Through Caching 10-23  
Summary 10-24

## **11 Other Cache Group Operations and Topics**

Objectives 11-2  
Create a Multiple-Table Cache Group 11-3  
User-Managed Cache Group 11-4  
Create a User-Managed Cache Group 11-5

PROPAGATE and READONLY Cache Table Attributes 11-6  
Flush a Cache Group 11-8  
Create a Cache Group by Using SQL Developer 11-9  
Specify AUTOREFRESH Cache Group Attribute by Using SQL Developer 11-14  
Define Cache Group Data Aging Policy by Using SQL Developer 11-15  
Load or Refresh a Cache Group by Using SQL Developer 11-16  
Unload a Cache Group by Using SQL Developer 11-17  
Flush a Cache Group by Using SQL Developer 11-18  
Drop a Cache Group by Using SQL Developer 11-19  
Summary 11-20

## **12 Overview of TimesTen to TimesTen Replication**

Objectives 12-2  
TimesTen to TimesTen Replication 12-3  
Active-Standby Pair 12-4  
TimesTen Replication Architecture 12-5  
Asynchronous Replication 12-6  
Synchronous Replication 12-7  
Summary 12-8

## **13 Configuring Replication of TimesTen Databases**

Objectives 13-2  
Configure a Replicated System 13-3  
Active-Standby Pair Replication Scheme 13-4  
Create an Active-Standby Pair Replication Scheme 13-5  
Create and Configure the Standby and Subscriber Databases 13-6  
Asynchronous Replication: Data Flow 13-7  
Return Two-Safe Synchronous Replication Scheme 13-8  
Return Two-Safe Replication: Data Flow 13-9  
Replicate Cache Tables 13-10  
Replicate Cache Tables in a Read-Only Cache Group 13-11  
Replicate Cache Tables in an Asynchronous Write-Through Cache Group 13-12  
Configure Replication on Cache Tables 13-13  
Attach an Active-Standby Pair to a Cache Grid 13-14  
Start the Replication Agent and Set an Agent Start Policy 13-15  
ttStatus Utility: Replication Agent Status 13-16  
Replication Agent Port Allocation 13-17  
Compress Replicated Updates 13-18  
Replication on Systems with Multiple Network Interface Cards (NICs) 13-19  
Summary 13-20

## **14 Database Recovery and Monitoring Replication**

- Objectives 14-2
- Replication States 14-3
- Change the Replication State 14-4
- Transaction Log File Threshold 14-5
- Recover a Failed Replicated Database 14-6
- Recover a Failed Replicated Database in an Active-Standby Pair 14-7
- Automatic Client Connection Failover 14-9
- Configure Automatic Client Connection Failover 14-10
- Active-Standby Pair Database Recovery with a Read-Only Cache Group 14-11
- Active-Standby Pair Database Recovery with an AWT Cache Group 14-12
- TimesTen Replication Monitoring: `ttRepAdmin` Utility Commands 14-13
- TimesTen Replication Monitoring: `SYS.MONITOR` System Table 14-17
- TimesTen Replication Monitoring: Built-In Procedures 14-18
- Summary 14-19

## **15 Using Oracle Clusterware with TimesTen to Provide a High-Availability Solution**

- Objectives 15-2
- Oracle Clusterware and TimesTen 15-3
- Oracle Clusterware and TimesTen System Requirements 15-4
- TimesTen Resource Monitoring Managed by Oracle Clusterware 15-5
- Oracle Clusterware Levels of Availability for TimesTen 15-6
- Create a Cluster for Basic Level of Availability 15-7
- `ttCWAdmin` Utility 15-8
- Configure Oracle Clusterware Resources for an Active-Standby Pair 15-9
- Implement Application Failover for Basic Level of Availability 15-10
- Simple and Automated High-Availability Solution 15-11
- TimesTen Nodes in a Cluster Configured for Advanced Level of Availability 15-12
- Create a Cluster for Advanced Level of Availability 15-13
- Configure Oracle Clusterware Resources for Advanced Level of Availability 15-14
- Failure of the Active Database 15-15
- Failure of the Standby Database 15-16
- Recover Automatically from Failure of Both Master Database Nodes 15-17
- Recover Manually from Failure of Both Master Database Nodes 15-18
- Summary 15-19
