The following two lists explain Oracle University typographical conventions for words that appear within regular text or within code samples.

### 1. Typographic Conventions for Words Within Regular Text

Convention	Object or Term	Example
Courier New	User input; commands; column, table, and schema names; functions; PL/SQL objects; paths	Use the <code>SELECT</code> command to view information stored in the <code>LAST_NAME</code> column of the <code>EMPLOYEES</code> table.  Enter <code>300</code> .  Log in as <code>scott</code>
Initial cap	Triggers; user interface object names, such as button names	Assign a When-Validate-Item trigger to the ORD block.  Click the Cancel button.
